

RESEARCH STATEMENT	My research interest lies in AI and machine learning, including their theories and real-world applications, such as computer vision, large language models and AI4Science. I am also interested in AI's application in optimization and operation research.	
EDUCATION	<b>School of Data Science, The Chinese University of Hong Kong, Shenzhen</b> Shenzhen, China	
	<i>B.Sc. in Data Science and Big Data Technology</i>	2022.9 - 2026.7
	<ul style="list-style-type: none"><li>• CGPA: 3.89/4.00, Major Rank: 7/150.</li><li>• Dean's List, 2023.6.</li><li>• Dean's List, 2024.6.</li><li>• Academic Performance Scholarship: Class B, AY2023–2024.</li></ul>	
	<b>Berkeley Global Access program, University of California Berkeley</b> Berkeley, U.S.	
	<i>Exchange student</i>	2024.8 - 2024.12
	<ul style="list-style-type: none"><li>• GPA: 4.00.</li></ul>	
WORKING PAPER	<b><i>Resource Theory of Asymmetric Distinguishability with Partial Information</i></b>   School of Data Science, The Chinese University of Hong Kong, Shenzhen	2025.7 - Current
	<ul style="list-style-type: none"><li>• Collaborated with Prof. Kun Fang, with me being the <b>first author</b>. Will be finished in September 2025.</li><li>• Formulated and analyzed distinguishability distillation and dilution tasks, established optimal rates' connection with quantum divergences, and proved a reversibility theorem based on regularized quantities.</li><li>• Carried out most mathematical derivations and paper drafting; strengthened skills in mathematical reasoning, collaborative research, and communicating complex theoretical ideas under pressure.</li></ul>	

## EXPERIENCES

**Prof. Kun Fang's Group** | School of Data Science, The Chinese University of Hong Kong, Shenzhen 2025.7 - Current

- First author on the paper *Resource Theory of Asymmetric Distinguishability with Partial Information*.

**Prof. Kai Zhou's Group** | School of Science and Engineering, The Chinese University of Hong Kong, Shenzhen 2024.08 - 2025.08

- Explored theoretical foundations and practical applications of deep generative models such as score model and flow model, and their relationships with statistical physics.
- Investigated rectified flow and stochastic interpolation methods.
- Conducted research on the paper *Energy based diffusion generator for efficient sampling of Boltzmann distributions*, successfully reproduced the results, and proposed to replace its core procedure with stochastic interpolation.

**Dr. Jingyi Zhao's Group** | Shenzhen Research Institute of Big Data 2024.12 - 2025.6

- Conducted research on Learning to Optimize (L2O) and Mixed Integer Non-Linear Programming (MINLP). Contributed to the paper *Learning to Optimize for Mixed-Integer Non-linear Programming with Feasibility Guarantees*.
- Built a *predict-then-optimize* framework to solve a real-world wind power optimization problem in Shanxi Province, incorporating techniques such as Mixture of Experts (MoE) for forecasting and MINLP for constrained optimization.

**Prof. Junfeng Wu's Group** | School of Data Science, The Chinese University of Hong Kong, Shenzhen 2024.01 - 2024.08

- Studied Simultaneous Localization and Mapping (SLAM), Neural Radiance Fields (NeRF), and privacy-preserving techniques in machine learning, including Federated Learning and Split Learning.
- Contributed to the paper *S<sup>2</sup> NeRF: Privacy-preserving Training Framework for NeRF*, which applies techniques including Split Learning to NeRF to enhance data privacy during 3D scene reconstruction.

## PROJECTS

**Comparing Traditional Methods and Diffusion Models for Hybrid Image and Visual Anagram Generation Tasks** | 2025 Summer

- Implemented hybrid image and visual anagram generation using diffusion model and traditional methods such as image pyramids.
- Systematically compared the performance using multiple metrics such as visual quality and CLIP similarity score.
- Link: <https://github.com/YaoSiqi2003/ECE4513-Image-Processing-and-Computer-Vision>.

**Building Interpretable Emotional Dialogue Agents via Chain-of-Thought Reasoning** | 2025 Spring

- Developed a unified framework for machine emotional intelligence that integrates emotion recognition, cause inference, shift detection, and dialogue generation using Chain-of-Thought (CoT) reasoning.
- Link: <https://github.com/YaoSiqi2003/DDA4210-Advanced-Machine-Learning>.

**ICU Simulation and Resource Optimization** | 2024 Fall

- Utilize simulation frameworks to optimize resources in the Intensive Care Unit (ICU), including critical components such as beds and nursing staff.
- Key components include ICU queue simulation, nursing staff Workflow simulation and various optimization methods such as exhaustive search, heuristics, and Pareto frontier-based method.
- Link: <https://github.com/YaoSiqi2003/IND-ENG-174>.

**AI Programming and Applications** | 2024 Fall

- Implement various applications of AI, including search algorithms, multi-agent systems, reinforcement learning, probabilistic reasoning and deep learning.
- Link: <https://github.com/YaoSiqi2003/CS188-Introduction-to-Artificial-Intelligence>.

INTERNSHIPS	<b>Shenzhen Guanghuiyuan Asset Management Co., Ltd.</b>   Shenzhen, China 2023.07 - 2023.08 <ul style="list-style-type: none"> <li>Studied and participated in value investment research.</li> </ul>
TEACHING	<b>Teaching Assistant</b>   CSC4012 Introduction to Quantum Computation and Quantum Information, The Chinese University of Hong Kong, Shenzhen 2025 Fall <ul style="list-style-type: none"> <li>Assisting in course delivery, including grading, tutorial sessions, and student consultations.</li> </ul>
SKILLS	<b>Languages:</b> Mandarin, Cantonese, English. <b>Skills:</b> Python, TensorFlow, PyTorch, C, C++, Linux, SQL, Qiskit. <b>Others:</b> Solid math foundation. Eager to learn new things.
